

This testimonial is for PANG YI HAHN, who has successfully completed an internship at Climate Impact X as a Data Engineer Intern from 01-Jan-2025 to 27-June-2025.

During his internship, Yi Hahn was actively involved in many impactful initiatives, including:

- Supporting data quality efforts related to carbon project and issuance data, strengthening his expertise in the Voluntary Carbon Market (VCM) domain as well as technical skills in SQL and Snowflake.
- Contributing to our core data platform through the development of multiple new data pipelines. This enabled him to develop a solid understanding of core data engineering patterns using Airflow and Python.
- Introducing new components to our data engineering stack, including the implementation of Azure Functions and Logic Apps to address emerging use cases. Through this, Yi Hahn gained exposure to CI/CD principles and deployment practices in cloud environments.

Yi Hahn consistently demonstrated:

- A strong ability to learn quickly and adapt to new tools, technologies, and domain knowledge.
- A self-starter mindset, showing initiative in identifying areas to contribute, seeking out new tasks, and independently driving his work forward
- Excellent collaboration skills, engaging effectively with stakeholders, scheduling and leading meetings, and taking ownership of discussions around requirements and data validation.

Yi Hahn has been a valuable contributor to the team, and I'm confident he will continue to excel in his future endeavours.

Sincerely,

Stephen Matthew

Data Engineering
