EXPERIENCE

Data Analytics Engineer, Operation Intelligence

Aug 2026 – Present

Micron Technology

- ...

Data Engineer Intern

Jan 2026 – May 2026

Climate Impact X

- Led migration of legacy SQL pipelines to dbt and implemented materialization strategy to optimize Snowflake compute performance, reducing runtime by 86% (from 66 to 9 mins)
- Developed dbt tests and monitoring dashboards to visualize data pipeline health, flagging 7 major SQL logic errors
- Piloted Microsoft Fabric Data Agent to translate natural language into database queries, optimizing semantic context and capacity cost

Data Engineer Intern

Jan 2025 – Jun 2025

Climate Impact X | [Testimonial](#)

- Built 18 automated ETL pipelines (Airflow, PySpark, Azure) to ingest multi-source data into Snowflake and MongoDB, saving 10+ manual hours weekly
- Refactored Snowflake schema into medallion architecture to consolidate 40+ views, improving data lineage and fixing schema redundancies
- Engineered 2 CI/CD pipelines (Bash, Azure DevOps) to automate cloud deployments, ensuring environment parity

Environmental Engineer Intern

May 2024 – Aug 2024

Carbon GPT | [Testimonial](#)

- Built 4 LLM prototypes (Streamlit, Groq API) to automate tasks, supporting pitches to UOB, CIMB, and Bursa
- Developed ETL pipeline (Python, PostgreSQL) to process 1.5M+ records, optimizing database scalability

SKILLS

Programming Languages: Python (Pandas, NumPy, FastAPI), SQL, Java, R

Data Stack: Spark (PySpark), Airflow, Kafka, dbt | Snowflake, Databricks, Fabric, PostgreSQL, MongoDB

Cloud, ML & BI: AWS, Azure, Docker, Git, CI/CD | PyTorch, Scikit-learn | Power BI, Excel

Certifications: [AWS Certified Cloud Practitioner](#), [Databricks Certified Data Engineer Associate](#)

PROJECTS

Local Snowflake SQL Transpiler | [DuckDB](#), [SQLGlot](#) | [GitHub](#)

- Programmed a local Snowflake SQL execution environment to enable fast, cost-free query testing

Real-Time Stock Streaming Dashboard | [Kafka](#), [Docker](#), [Streamlit](#) | [GitHub](#)

- Created a real-time stock trading simulator to stream and visualize high-frequency market data

Weather Analytics ELT Pipeline | [AWS Lambda](#), [S3](#), [Redshift](#) | [GitHub](#)

- Engineered a cloud-native ELT pipeline to extract, load, and analyze Singapore weather data

SGX Derivatives Data Downloader CLI | [Python](#) | [GitHub](#)

- Built a CLI tool to automate SGX derivatives data retrieval with retry, logging, and scheduling support

EDUCATION

Georgia Institute of Technology

Aug 2026 – Present

Master of Science, Computer Science (Computing Systems)

National University of Singapore

Aug 2022 – Jun 2026

Bachelor of Engineering (Hons), Environmental Engineering and Data Analytics

- GPA: 4.46/5.0 (Distinction) | ASEAN Scholar
- Dissertation Project: Physics-Informed Machine Learning (Symbolic Regression) for Rainfall-Runoff Modelling
